# 4" CAVITY DUPLEXER / 66-13-44 PRODUCT SPECIFICATIONS 

The 4 cavity 4 " base station duplexer is ideal for quick and easy installations.
This filter is designed for combining two frequencies that need extra isolation or used as a pre-selector. Comprod provides 6 -cavity configurations for higher isolation requirements. Selectivity can be determined by the field adjustable capacitors. Each cavity is temperature compensated for operation between $-40^{\circ}$ to $+80^{\circ} \mathrm{C}$, and manufactured with a gold alodine finish, silver-plated loops and plated tuning rods for superior performance.

## KEY FEATURES

> Temperature Compensation :

- Assures frequency stability with extremely low drift
> High Attenuation :
- Minimizes desense and interference from adjacent systems
> Adjustable Loops

Specifications are for minimum Transmit to Receive separation
