HIGH POWER HYBRID COMBINERS

HTC-80-OX

Our Hybrid Transmit Combiners are designed for compact, close frequency installations. Our HTCs are perfect for very closely spaced frequency transmitters. These devices are ideal for use when our X-Pass technology does not provide adequate performance and isolation for very close TX-TX spacing. Hybrid Combiners are also ideal for intermodulation panels, providing extra protection with their second harmonic filters, or when physical space is at a premium, and for providing extra isolation between two very close transmitters.

- High Isolation
 - o Minimizes intermodulation products
- Low loss
 - Maximizes system performance
- Continuous Power
 - Physical size and materials used maximize the performance across the operating band
