PARABOLIC DIRECTIONAL ANTENNA

698-960 MHz

Parabolic Reflector Series Antennas

The Reflector antenna is a SRSP-507 Category A compliant antenna. These antennas have a very high front-to-back ratio. They are broadband and are ideal for point-to-point applications where restrictions on beam width are present. Performance is constant throughout the band. The antenna has a rugged design to withstand harsh environmental conditions. These antennas have ultra-low VSWR ratings and will not exceed 1.5:1 VSWR ratio with 0.5" of radial ice. The 965-70 is a highly-directive parabolic antenna consisting of a back-firing dipole reflector assembly for increased gain and directivity. The mounting hardware supplied will permit either vertical or horizontal polarization. DC ground for lightning protection. Black Anodized and Dipole Radome protected versions are available. This antenna is also available in Low-PIM (-150 dBc; two 20W carriers).
